Abstract (en)
[origin: EP1445572A1] The device (1) has a coil (2) linked with a power generator (3), generating a magnetic field, where the generator is activated by a control box (4). The coil is pivoted to a box (5) and takes retracted and deployed positions with respect to the box (5). The coil lodges inside the box and comes out of the box in the retracted and deployed positions, respectively. The coil is activated by an electric motor. The coil is pivoted at an angle of ninety degree to pass from its retracted position to deployed position.
