Abstract (en)

[origin: EP1445761A1] A process for a speech support system such as a communication or intercom unit in a motor vehicle comprises a microphone (30) and loudspeaker (31) with a band pass filter (32) between them which is adjusted according to a comparison of signal (S) power between a search frequency and an integral multiple frequency or power comparison. Independent claims are also included for the following: (a) a device as above comprising decision logic; (b) an operating process as above using feedback; and (c) an operating device using feedback.
