Abstract (en)  
[origin: WO02053091A2] The invention concerns the use as medicine of an active compound of general formula A'<u>-----</u> V'<u>-----</u>C', capable of restoring at least the entity A by cleaving the corresponding bonds between A' and V', and optionally capable of restoring likewise the entities V and C by cleaving in vivo the bond V'----- C' or V'- C' provided that: V is a vectorizing biogenic compound, of general formula X-R-Y, wherein R represents a hydrocarbon chain of 2 to 10 carbon atoms, aliphatic, cyclic, or alicyclic, saturated or unsaturated, optionally substituted by C1-C5 alkyl groups, and/or hydroxyl groups; X and Y are each a free acid, amine, or alcohol function. A and C are two respectively different active principles, one of which comprises a chemical function complementary to the function X, capable of reacting with the latter to produce a bond, ionic A'----- V' or covalent A - V, cleavable in vivo, and the other comprises a chemical function complementary to the function Y, capable of reacting with the latter to produce a bond, ionic V'----- C or covalent V'- C', cleavable in vivo
