Abstract (en)
[origin: WO03042069A2] The invention concerns a fluid product dispenser comprising: a fluid product reservoir (12) defining at least a mobile actuating wall (21); a dispensing orifice (41), and spring means (7) for stressing the actuating wall to increase the reservoir to its maximum volume. The invention is characterized in that the spring means (7) co-operate with winding means (11) adapted to cause the spring means to urge the actuating wall from an initial state wherein the spring means do not stress the actuating wall.
