Abstract (en)  
[origin: DE10154177A1] The invention relates to novel nucleic acid molecules, the use thereof for the construction of genetically improved micro-organisms and methods for the production of fine chemicals, in particular amino acids by means of said genetically improved micro-organisms.  
[origin: DE10154177A1] Isolated nucleic acid (I) that encodes particular protein sequences (II) that have, at specific positions, an amino acid alteration. Independent claims are also included for: (1) Vector that contains at least one (I); (2) Host cell transfected with at least one vector of (1); and (3) Method for preparing fine chemicals by culturing cells of (2).
