Abstract (en)
[origin: WO03033789A1] The invention concerns a texturing machine for forming a composite yarn from several synthetic yarns. Said texturing machine comprises therefor several treatment units and a winding device. The treatment units comprise at least several reeling feeders, each reeling one yarn from a supply spool. The invention is characterized in that at least one of said feeders is maintained mobile on the frame of the machine so that it is possible to select different yarn input positions by moving the feeding device on the machine frame.
