Abstract (en)

[origin: WO03030183A2] The invention concerns a neutron shielding material for maintaining sub-criticality based on unsaturated polymer: Said material comprises an unsaturated polyester resin, at least an inorganic boron compound, and at least a hydrogenated inorganic compound, in amounts such that the boron concentration is 4.1021 to 25.1021 atoms per cm³ and the hydrogen concentration is 3.1022 to 5.5.1022 atoms per cm³.
