Abstract (en)  
[origin: WO03037039A1] The three-dimensional electroluminescence display comprises a main body (1) and an electroluminescence device (20). Said electroluminescence device (20) comprises a film (2) and an electroluminescent arrangement (10) which together form a whole. The surface of the film (2), facing the electroluminescent arrangement (10) is provided with the motifs (9) for display. The electroluminescent arrangement (10) comprises a front electrode (11) and a back electrode (12), between which a dielectric (13) is located. The front electrode (11) is provided with the layer which produces the motif (9) and is embodied in one piece with the same. A supply source (15) is arranged within the surface of the electroluminescence device (20), which contacts the electrodes (11,12) of the electroluminescence device (20).
