Abstract (en)

The process involves operating in a normal functioning mode to perform a temporary action on a control unit of a command transmitter (24) to cause a continuous movement of a closing unit e.g. commercial gate. A degraded functioning mode causes a continuous movement of the closing unit through continuous action on the control unit. The mode is selected based on detection of sensors in working state by detection unit. An independent claim is also included for a security installation for maneuvering a closing unit e.g. commercial gate.

Abstract (fr)

Le procédé comprend au moins: a) un premier mode, dit de fonctionnement normal, dans lequel une action temporaire sur un élément de commande entraîne un mouvement continu d'un élément de fermeture (7) et b) un deuxième mode, dit de fonctionnement dégradé, dans lequel un mouvement continu de l'élément de fermeture (7) requiert une action continue sur l'élément de commande, le mode de fonctionnement étant sélectionné selon la disponibilité de capteur(s) (20) déterminée par des moyens (28) de détection.
