Abstract (en)

[origin: EP1447776A1] Device for checking the validity of documents (13), especially banknotes has a light source (20) that generates light of a first wavelength and a detector (45) that detects light of a second wavelength that is generated by interaction of light of the first wavelength with material incorporated in the document surface. The documents are passed between light source and detector, which are arranged opposite to each other.
