Abstract (en)
[origin: WO03061540A1] The invention relates to an absorbent article comprising an absorbent structure enclosed between a surface layer (2) and a backing layer (3), where the absorbent structure consists of at least one movable absorption body (4, 4a) and where a transport means (24) is arranged on each movable absorption body (4, 4a), the transport means (24) being designed in such a manner that it has lower friction a given direction against surrounding material than in other directions.
