Abstract (en)

[origin: WO03041930A1] The invention concerns a method for making boards based on hydraulic binders such as plaster, said boards having bevelled edges. Said method is characterized in that it comprises the following steps: a) a step which consists in inserting, beneath the preform (5), a lath (6, 23) whereof the length is at least approximately equal to the width of the preform (5); a step which consists in removing said lath (6, 23); and b) in cutting the preform at the bevel (8) produced by the lath (6, 23). The invention also concerns a production line for making such boards and a device used for making such boards.
