Abstract (en)

[origin: WO03045734A1] The invention relates to a sensor device (10), in particular for controlling the illumination units (30) of a motor vehicle. Said device comprises at least one receptor (16, 18) for receiving illumination from at least one receiving area and a control device (28), capable of controlling peripheral devices (30). The sensor device is provided with a diffractive element (12), which can be coupled to a pane (14), is preferably configured as a hologram and is located in the receiving area of the receptor (16, 18).
