Abstract (en)

[origin: WO03037695A1] The invention concerns a device for retaining a motion sensor consisting of a transmitter (2) and a receiver (3). The transmitter (2) and the receiver (3) are form-closed on the structural element (1) respectively by means of a housing (20, 30) and a retaining element (21) corresponding to the housing (20, 30) and connected thereto by a screw connection (22). Therefor, the housing (20, 30) and the retaining element (21) form a clamping connection with the structural element (1), the housing (20, 30) comprising a clamping element (23) in operative connection with the structural element (1).
