Abstract (en)

[origin: WO03045832A1] A beer dispensing tap, apparatus and system are provided which allows for dispensing of a usually pressurized beverage such as beer into a serving vessel with consistent results. The beverage passes through a novel dispensing tap having a nozzle whose bore is adapted to impart a circular or swirling motion to the beverage stream as it exits the tap. The beverage stream is projected into the vessel in a preferred embodiment directly toward the base of the vessel where, because of its motion, it swirls around the vessel whilst it fills. This provides a pleasing visual effect for the customer during the pouring operation as well as a consistent presentation of beer to the consumer.
