Abstract (en)
[origin: WO03040078A1] The invention relates to a method for the production of formic acid formates, by reacting formic acid methyl esters with water and a basic compound, having a pKa value of the corresponding acid of the corresponding dissociation degree which is ≥ 3 , measured at 25 DEG C in aqueous solution, by separating the obtained methanol and by optionally adjusting the desired degree of acidity by adding formic acid.
