Abstract (en)
[origin: US2004245296A1] Items of clothing are smoothed by pulling them taut from within by way of an inflatable body that is detachably linked with a base that has a fan for inflating the inflatable body. In order to releasably fasten the inflatable body, the base has second fastening devices that are detachably linked with the first fastening devices of the inflatable body. In order to render it easier for an operator to fasten the inflatable body on the base and to reduce the risk of insufficiently fastening it, the inflatable body is provided with a rigid shaped element that is disposed next to the first fastening device.
