Abstract (en)
[origin: WO03047045A1] The invention relates to a plug (1), comprising a base body (3) and contact elements, running in the interior of the base body (3). On the opposing sides of the external wall of the base body (3), two wing-shaped connector elements (8) open out, which project over the rear side of the base body (3). The undersides of the connector elements (8) form contact surfaces for the production of soldered connections to a circuit board (2).
