Abstract (en)  
[origin: DE10156771A1] An electric domestic appliance comprising a main switch (18) having a predetermined turn-on actuation time period during which it must be actuated in order to be shifted from an off position into an on-position. The actuation time period can be adjusted by the customer. [origin: DE10156771A1] The electrical domestic machine has a main switch (18) for on-off switching of the power supply with a defined switch-on activation period during which it must be operated to change over from its off setting to its on setting. The length of the switch-on activation period can be freely selected within defined limits using a period adjustment arrangement (14,22,24,6-1,8-1) provided for this purpose.
