Abstract (en)
[origin: US2004247185A1] An image processing apparatus is provided that has a smaller circuit size and flexibly copes with applications having various amounts of additional information. This image processing apparatus that produces data having the additional information added to the encoded data of an image includes: a data processing unit that produces data having a data write area for writing a desired amount of data of the additional information at a predetermined spot in the encoded data of the image; and a data correction unit that writes the data of the additional information in the data write area in the data produced by the data processing unit.
