Abstract (en)

A rail vehicle bogie comprises wheel sets (1) journaled in longitudinal side frames (3) connected by a transverse bolster. A bogie brake therefor comprises transverse brake beams (4, 5), each brake beam having at each end a brake block holder (7) and being suspended from the bolster by suspension links. <??>A transmission rod (11), extending in the longitudinal direction of the bogie, is connected - by means of upwardly extending means (12, 13) - at one of its ends to a pull rod (10) of a pulling brake actuator (9) in the first brake beam (4), the pull rod (10) extending in the direction away from the second brake beam, and at the other end to the second brake beam (5) and is suspended from the first brake beam (4) by means of a suspension lever arrangement (17-20). <IMAGE>
