Abstract (en)
To be able to handle an FIBC (2) by a forklift without prior positioning of the FIBC (2) on a pallet and without using the lifting loops or the like to increase the overall stability of the FIBC over the full structure of the FIBC (2), it is suggested, that one or more reinforcing elements (20) are fixed to and connecting opposite surfaces of the sidewalls (4), and stiffening elements (22) are fixed to and connecting the one or more reinforcing elements (20) with the inner margins (26) of the shoulders (14). <IMAGE>
