Abstract (en)  
[origin: EP1449802A1] The present invention relates to sliding doors (10;12) used on landings and cars of elevator systems (1). In particular the invention provides door arrangements that permit greater versatility in the space utilization within a hoistway (2) of an elevator system (1). The landing and car (4) are provided with horizontally sliding doors (10;12) each formed from one or more panels (11;13) wherein the number of panels (11 ) in the landing door (10) is unequal to the number of panels (13) in the car door (12). Accordingly, the dimensions of the door-receiving spaces (B;A) for the landing door (10) and the car door (12) are unequal giving the installation designer greater flexibility to manipulate the layout of equipment within the hoistway (3). <IMAGE>
