Abstract (en)

[origin: EP1450384A1] The device has a transmission unit (26) moving with respect to a body (22) between a position of rest, a position of commutation, and a position of support. The transmission unit maintains a switch pin (24) between the position of commutation and the position of support. The position of commutation is spaced between the position of support with a distance of support greater than a distance of commutation (dc). An independent claim is also included for a motor vehicle.
