Abstract (en)
[origin: WO03030793A1] A hydrating nasal gel for shooting nasal tissues within the nasal cavity is described. The gel remains inside the nasal cavity for a substantial period of time to provide the user with relief from dry nasal tissues caused by sickness or arid environmental conditions. The gel can be applied using an applicator tip that applies the gel to the nasal tissues within the nasal cavity, substantially without applying the gel within the nasal passage.
