Abstract (en)

[origin: WO03047703A2] The present invention discloses a golf club manufactured with an elongated grip that extends down the length of the shaft. The elongated grip allows the golfer to assume a more comfortable choked down hand position which in turn will promote better choked down golf shots and thus better control of non-standard distances. The grip can be of uniform or varying thickness and have a length selected by the golfer to correspond to his preferred choked down hand positions. The present invention also discloses and promotes the use of a set of two or more golf clubs designed to produce distance differentials that exceed those that come with traditional sets.
