Abstract (en)

[origin: WO03041973A1] A process for the production of artefacts in substantially flexible material incorporating laminar decorative elements (3) made of precious metal comprising the following phases : laminating a sheet of said precious metal with intermediate and final annealing ; hammering the foil so obtained ; shearing or laser-cutting the hammered foil to obtain decorative elements of a pre-established shape; applying an attachment pin (4) by means of welding to each one of said elements ; deoxidising the decorative elements thus obtained; applying said deoxidised decorative elements to a flexible substrate (1, 6) in such a manner that they will not project from the surface of said substrate, particularly within appropriate impressions (2) produced in the substrate or between superposed layers (7).
