Abstract (en)  
[origin: WO03037752A2] The present invention concerns a container and a distribution system for transport and storing of granular/pellet material. The container comprises an outlet funnel means, a transport device inside the container, an electric identification means, a disinfection system, sensors for temperature/humidity, a control system and a modem for transferring information concerning the container and its content to a computer. The system comprises a container, control means and a transferring device provided with means for detecting how much material having been transferred from the container.
