Abstract (en)
[origin: WO03048480A2] The invention concerns an artificial stone facing made of front and corner elementary slabs (2, 3), the front slabs (2) having at least a male profile (4) and a female profile (5) on two of their lateral sides said to be transversely opposite. Said facing is characterized in that four differentiated elementary slabs (2A, 2B, 2C, 2D) form a laying module (M) designed to be assembled by being juxtaposed or superimposed to a similar laying module, said module (M) being formed by a first row of two slabs (2A, 2B) whereof the male (4) and female (5) profiles of one slab (2A) are at a different distance from a longitudinal edge of the slab (2A) with respect to the other slab (2B), the second row of slabs (2C, 2D) of the module (M) superimposed to the first row is formed by slabs (2C, 2D) having on their longitudinal edges diagonally opposite corner notchings (7, 8).
