Abstract (en)

[origin: WO03048535A1] The invention relates to a method for regenerating at least one diesel particle filter, according to which exhaust gas is introduced into the at least one diesel particle filter via a feed pipe and is discharged therefrom via a discharge pipe. The exhaust gas passing through the diesel particle filter is heated up and a closed recirculating circuit is produced via which the exhaust gas discharged from the at least one diesel particle filter is again introduced into the same.
