Abstract (en)

[origin: WO03049323A1] The invention provides a method of evaluating a path in a data-receiving system using multi-carrier modulation. A confidence indicator is determined for each data item received so as to provide a stream of confidence indicators parallel to the datastream received. The confidence indicators are ordered identical to the data received. The invention provides a device comprising means 110 for evaluating a confidence indicator for each carrier and means 121, 122 and 123 for laying out a stream of confidence indicators identical to a datastream received.
