Abstract (en)

A printer comprising a transport system for a recording medium, a printhead with a plurality of print units each of which is capable of printing a pixel line when the printhead is scanned over the recording medium, and a failure compensation unit (46) controlling the print operation such that a failure of a print unit is compensated, characterized in that a segmentation unit (54) is provided for dividing an image to be printed into segments containing different types of image information, and in that the failure compensation unit (46) comprises a memory (52) storing a plurality of compensation strategies and a controller (58) selecting one of said compensation strategies in accordance with the segment to be printed. <IMAGE>
