Abstract (en)  
[origin: EP1452472A2] A web deflecting device comprises two turning bar holders connected with axial ends of a shiftable turning bar and guided movably along two guides, respectively; an adjusting mechanism for adjusting the first and/or second turning bar holders along the guides to position the first and/or second turning bar holders for the shifting of the turning bar; and a manually operable connection between the turning bar and the first holder. A web deflecting device comprises a shiftable turning bar (1, 2); a first turning bar holder (11a, 11b, 11c) connected with one axial end of the turning bar for holding the turning bar; a second turning bar holder (12) connected with the other axial end of the turning bar for holding the turning bar; two guides (21, 22); an adjusting mechanism for adjusting the first and/or second turning bar holders along the two guides to position the first and/or second turning bar holders for the shifting of the turning bar; a manually operable connection between the turning bar and the first turning bar holder for manual separation and establishing a connection manually to separate the turning bar manually from the first turning bar holder during a shifting of the turning bar and to connect the turning bar manually with the first turning bar holder positioned in a shifted position. The turning bar holders are guided movably along the two guides, respectively.
