Abstract (en)
A low-voltage electric connection terminal, in particular for signal lights, comprises an outlet connector provided with a plate-like element having a through hole, and a plug connector having an elongated prismatic lead-in wire for engagement with said plate-like element. Said connectors are mutually coupled by fitting along a fitting direction which is inclined with respect to the outlet connector axis and with respect to the slipping-off direction which is also inclined with respect to the outlet connector axis. In a coupled condition said elongated prismatic lead-in wire passes through the through hole formed in said plate-like element. <IMAGE>
