Abstract (en)
[origin: WO03047709A1] The invention concerns a method for creating and managing a virtual environment (U), authorizing simultaneous and interactive access to the virtual environment to several users via a network, characterized in that a common system of coordinates is associated with the virtual environment and with the virtual spaces it contains, and the method consists in: defining at least two different virtual spaces of said environment, and for each virtual space storing on a server of the network, data comprising: data for intrinsically characterizing said space, and data containing addresses of the network of neighbouring spaces of said space.
