Abstract (en)

[origin: WO03047835A1] The invention relates to a fixing device for die platens and/or flange plates of a plastic moulding machine, especially an injection moulding machine, comprising a joint without an axis. The invention is characterised in that the axisless joint (6) essentially consists of a torsion element (6a). In a preferred embodiment, the torsion element (6a) is embodied in a rod-shaped manner, preferably as a round tube, the longitudinal extension thereof (L) being perpendicular in relation to the surface of the die platen (3) or the flange plate (4).
