Abstract (en)
[origin: WO03042041A1] A container for liquid contents, comprising a compartment 4 which is defined by flexible walls 2, 3 and whose volume is dependent on the relative position of the walls 2, 3. The walls 2, 3 have rim portions which engage each other and along which the walls 2, 3 are joined with each other in a common connecting portion 6. The container is characterised in that the walls 2, 3 are made in one piece, which is folded to form said walls 2, 3, and that the walls 2, 3 along said rim portions are sealed to form said connecting portion 6. The present invention also concerns a method and a device for producing such a container.
[origin: WO03042041A1] A container for liquid contents, comprising a compartment (4) which is defined by flexible walls (2, 3) and whose volume is dependent on the relative position of the walls (2, 3). The walls (2, 3) have rim portions which engage each other and along which the walls (2, 3) are joined with each other in a common connecting portion (6). The container is characterised in that the walls (2, 3) are made in one piece, which is folded to form said walls (2, 3), and that the walls (2, 3) along said rim portions are sealed to form said connecting portion (6). The present invention also concerns a method and a device for producing such a container.
