Abstract (en)

[origin: WO03052047A1] The invention concerns a device and methods for providing implants, cells or tissues, for example for grafts or in vitro research cultures, of tissue engineering or cellular therapy. The invention is particularly adapted to produce, in sufficient amount, specific cell populations, with high proliferation and/or differentiation potential adapted for use in tissue engineering, in repair surgery or therapy, in particular for humans. The invention also concerns a method for preparing such a device and its uses, in particular for treating tissue loss, and kits, transplants, tissues or biological preparations.
