Abstract (en)
[origin: WO03042531A1] The invention relates to a valve for the control of fluids, comprising several components (2, 3, 4, 5), arranged serially in the axial direction (X-X) of the valve. An external thread (9) is embodied on at least one of the components which engages with an internal thread on a tensioning nut (6). The tensioning nut (6) serves to pre-tension the components of the valve. A sealing element (8, 11, 17) is arranged between the internal thread (10) of the tensioning nut (6) and the external thread (9) of the component (2).
