Abstract (en)

[origin: EP1321771A1] Qualitative and/or quantitative determination of aggregates (A) comprising detecting the association of at least one probe (B) with at least one (A), before self-aggregation of (B) becomes predominant, where (B) is at least one protein or peptide, or their fragments or analogs, especially structures that correspond to a protein or peptide, and/or their fragments, is new. <??>An Independent claim is also included for identifying and optimizing substances (I) that modulate aggregate formation.
