Abstract (en)

[origin: WO02071196A2] The invention relates to a data processing unit (VPU) comprising logic cells (PAEs) clocked in operational fields in different configuration states and a clocking input means for setting the clocking of the logic cell. According to the invention, the clocking input means is configured in such a way that it can provide one type of clocking to at least one first cell (PAE) in a state-dependent manner, and provide another type of clocking to at least one other cell.
