Abstract (en)

[origin: WO03050756A2] The invention relates to a method of pairing a predefined type of card read terminal (2), comprising a central processing unit (6), with a predefined type of chip card (4) which is intended to store confidential data. The inventive method consists in: comparing (40) the electrical operating parameters of said card with specific, previously-stored electrical parameters; and authorising (42) access to the confidential data using said new memory card if the data compared are not identical.
