Abstract (en)  
[origin: WO03050963A1] Interactive, low power, collapsible, intelligent, multi-media display systems (100) for use as hand-held, portable communications devices are disclosed. A display communications device according to the invention can include a housing (102) that contains a processor, radio transceiver means for transmitting and receiving radio signals, and a collapsible display (106) that is mechanically coupled to the housing and electrically coupled to the processor. The display can have a surface area that is larger than any cross-sectional area of the housing. The processor can be adapted to extract display data from input radio signals, and to provide a representation of the display data to the display.
