Abstract (en)

[origin: CA2415645A1] The invention relates to a device and to a method for charging a riveting module (10) that is vertically displaced between a lower placement position and an upper charge position with blind break-mandrel rivets (100) or hollow - core rivets that consist of a shank and a reusable mandrel. Said device comprises a rivet supply (22) and, in addition to the riveting module (10), a funnel (24) that receives the rivet (100) with its mandrel (110) oriented upward and that is displaced laterally between a position below the rivet supply (22) and a position below the riveting module (10) in the charge position.
