Abstract (en)

The package (10) comprises a structure (12) made of cardboard or a like semirigid material and comprising a series of flaps which are assemblable into a prismatic form, which can be associated to a plastic or paper bag (11) to create a container and a support which can be used for the secure and stable transport of objects. The structure (12), initially a flat sheet (15), is located in an unassembled position in the bag (11) when the package is stored, before use. The structure is later assembled at moment of use by joining the first end flap (19) and the second end flap (20) of the flat sheet (15). The cardboard structure is usable independently of the bag (11). <IMAGE>
