Abstract (en)
The winder has a contacting roller (10) placed against a periphery of a reel (14). The contacting roller is divided in subsidiary and main roller segments (34, 46), where the subsidiary roller segment (34) includes an engaging mechanism (38, 40). The subsidiary roller segment is engaged and disengaged independently of the main roller segment (46). A slice-cutting knife is shifted axially to the reel jointly with the roller.

Abstract (de)
Aufwickler mit einer Anlegewalze (10), die gegen den Umfang eines Wickels (14) anstellbar ist, dadurch gekennzeichnet, daß die Anlegewalze (10) in mindestens zwei Walzensegmente (46; 34) unterteilt ist, von denen mindestens eins (34) einen Anstellmechanismus (38, 40) aufweist, mit dem es unabhängig von einem anderen Walzensegment (46) an und abstellbar ist. <IMAGE>
