Abstract (en)

The present invention relates to a device and method for panelling a structure (20) in connection with construction, comprising a gypsum plaster-board (10) having two opposite and substantially plane surfaces (11, 12) and at least a first edge side (13) and a second edge side (14), wherein the first edge side (13) comprises a projecting portion (17) and the second side edge (14) comprises a recess (18) corresponding to the projecting portion (17) so that the recess (18) and the projecting portion (17) form means for interconnecting adjacent gypsum plasterboards. The invention also relates to a building element comprising such a device. <IMAGE>
