Abstract (en)  
[origin: EP1455031A2] The seam insert for building plates provides for a seam between them with predetermined width and has a body (1) so dimensioned or shaped that it at least partly extends with clearance into at least one corresponding recess in a plate. This prevents the displacement of the plate or a plate series in a direction parallel to the seam over a predetermined dimension. A distance holder (4) is arranged on the body, which extends into the seam and has a thickness which corresponds to a desired maximum seam width. The body has a location (2) for the plates and at one end of the body a cap (3) is exchangeably fixed.
