Abstract (en)

[origin: EP1455492A2] A system and method for controlling a data rate of a next reverse packet data frame in a mobile communication system for transmitting a reverse packet data frame from a mobile station to a base station over a reverse packet data channel at a data rate selected from a plurality of data rates. The mobile station receives reverse control information for the data rate of the reverse packet data frame, and transmits the next reverse packet data frame at a data rate that is determined according to the reverse control information.
