Abstract (en)

[origin: WO03045345A1] The invention relates to cosmetic compositions containing certain inorganic fillers and thus exhibiting particular effects in terms of UV behaviour with or without organic UV filters, IR behaviour, colour, and cosmetic dermal sensation. Said compositions contain ground, optically clear glass particles which have an average size of between 0.01 and 100 microm in a proportion of between 0.1 and 55 wt. %, and are formed from a glass which is melted then solidified. The inventive compositions also contain other cosmetic carrier materials, auxiliary materials, active ingredients or mixtures of the same. Said glass particles can consist of optical glass, phototropic glass, IR glass, UV glass, coloured glass, glass ceramics or mixtures of the same.
